VOL. 80

Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were randomly assigned to either a control group (CON) or a training group (TRN). The TRN group performed a 12-week training program consisting of three sessions per week of aerobic exercise. The CON group did not exercise. The HR and EE were measured at baseline and after 12 weeks. The TRN group showed a significant decrease in HR and a significant increase in EE compared to the CON group. The results suggest that a 12-week training program can improve the cardiovascular fitness and energy expenditure of sedentary, middle-aged women.

CEVY:

CONCLUSIONS

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.
